

ANNUAL
IMPACT
REPORT 2019 -2020
RWANDA PROGRAM

Girinka or One milky cow per poor family is one of the country leading initiative in both tackling the issues of malnutrition which causing stunting in children under five years in Rwanda, and response to lack of industrial fertilizers since cows produces manure, reducing poverty through

dairy cattle farming and improving livelihoods through increased milk consumption and income generation.

FMO has been supporting the government in this program by providing good cows breeds to families in need in three sectors of Bugesera District (Rilima, Nyarugenge and Shyara).

The cows are either pregnant or directly inseminated before handed to the beneficiary to be hosted in well constructed shelter equipped with compost to accommodate cow dung and farming materials like wheelbarrow and spades to prepare organic manure.

124 Families received cows in the program								
Year	2013	2014	2015	2016	2017	2018	2019	2020

SHYARA	10	0
TOTALS	94	30

THREE GOATS PER POOREST FAMILY

To circumvent the issue of high density of population and insufficient cultivable land, goats rearing have been found as a very profitable livestock as alternative to cows.

Since 2014, FMO implements the Three goats program to make sure families without cultivable land are part of the development journey in the community. Each family is provided of 3 female goats and required to give back three kids to the next neighbor on the beneficiary list provided by the local authority.

The beneficiaries of the cows also received three goats to accompany the cow since this last one take long to reproduce, so that meanwhile the beneficiary can have potential source of income to prevent he/she sells the cow.

So far, this has been the most successful program as it serves as a quick source of income to solve basic needs of the household, like sending children to school , health insurance, clothes and hygienic materials.

This project contributed significantly to overall income generated by these families. 1444 goats distributed to 473 families in Rilima, Nyarugenge and Shyara Sectors

467 Families received goats in the program.

SHYARA SECTOR	150	0

In support to the Government's effort to promote the access to finances by small business doers, create diverse jobs in order to reduce the number of population living on subsistence farming, Fondazione Marcegaglia Onlus (FMO) have been allocating part of its annual budget to create a sustainable source

of funding, managed and administered by the community itself.

Selected small business projects are funded in a range of 50,000 to 3,000,000 RWF. Since 2013, the fund has been expended from Rilima to Nyarugenge and Shyara to support in total 237 businesses with 29,401,235 RWF.

Bugesera being a semi-arid area with frequent drought and long sunny season, alternative to continue farming is to pump water from its lakes to uphill with cultivable lands. Individual people with enough lands or grouped people with small lands were put together to benefit from diesel pump and its accessories in partial funding to be repaid through the microcredit fund. This year 1 & 4 irrigation projects in Rilima & Shyara respectively were funded, total 11 irrigation projects realized and beneficiaries trained

CHILD PROTECTION PROGRAM

In order to protect children under 6 years, an Early childhood Development center was constructed and equipped to ensure the delivery of 5 ECD services to 120 kids of Kimaranzara Cell in Rilima sector, Bugesera District. The center has three programs:

Community based ECD center: in which 120 kids benefit with 5 components of ECD

i.e Education, Nutrition, Security & Safety, Hygiene & Sanitation and Health.

Home based & Home Visitation program: 436 children and their parents have been reached at selected homes in their respective villages with nutritive food packages, hygienic materials and weekly positive parenting sessions.

Kalilisi Community

Two more classrooms for Early Childhood Development for Kalilisi Community have been rehabilitated and equipped to host 70 kids of Kabeza Cell in Rilima sector, Bugesera District . This program aims at reducing the number of children who can not attend pre-primary and exposed to different risks in the community while their parents are in the fields cultivating. The centre is equipped with recreational and stimulating facilities.

MALNUTRITION AND STUNTING PREVENTION

- In a continuous effort to prevent and eradicate malnutrition in children under five years, Growth measurements for 1,412 children from food insecure families have been monitored regularly through 15 village kitchen in three sectors to ensure they don't fall in stunting category.
- 349 children presented symptoms of malnutrition and stunting have been treated and provided with weekly fortified food package, eggs, and milk.
- Their Parents have been Trained on preparing balance diet, positive parenting
- For sustainable solution of malnutrition problem, a poultry project was initiated with 500 laying chickens from which eggs will be distributed to malnourished kids or children from food insecure families.
- FMO continues to provide assistance the three health centers to ensure no child stunts

UNIVERSITY & TVET SCHOLARSHIPS

In academic year 2019-2020 , 131 scholars are pursuing certificates & degrees in different trades , 71 new scholarships awarded to girls and boys from Bugesera District, while 60 were perspective scholars in different Universities and TVET Centers

RILIMA WOMEN EMPOWERMENT CENTER

As response to big number of scholarships applications who were the single mothers we founded a training center for Tailoring, knitting, weaving and embroidery which initially received and training 25 young, single mothers in Rilima.

This center receives women half day so that they can go home and continue to take care of their babies and do other activities.

SCHOOL FEEDING FOR TWELVE YEARS BASIC EDUCATION

FMO provides 864 students from food insecure homes or coming from long distance to school of Rilima, Nyarugenge and Shyara Sectors with a daily hot lunch composed of maize, beans, vegetable oil and salt Home Grown School Feeding initiative.

This program tackled the dropout problem were facing the 12years basic education program in seven schools we are currently working with.
